- **Key words:** multi-agent reinforcement learning (MARL), safe MARL, robust MARL, game theory
- Designed an algorithm to exploit the advantages raised by the extended sensing capability of connected autonomous vehicles (CAVs) through beneficial information sharing.
- Analyzed quantum key distribution protocols through a game theoretic framework to show improved noise tolerance and secure communication rate assuming adversaries are "rational".
- Designed an integrated information sharing and multi-agent reinforcement learning framework for the behavior planning of connected autonomous vehicles to improve traffic efficiency and safety.
